Pred. No. is the number of results predicted by chance to have

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistries or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one m13 subclone.

University of Wisconsin-Madison (Frederick R. Blattner, director).
Supported by NIH grants HG00301 and HG01428 (from the Human Genome Project and NCHGR). The entire sequence was independently frames were determined using GeneMark Software, kindly supplied by Mark Borodovsky, Georgia Institute of Technology, Atlanta GA, have been correlated with genetic loci are being annotated with CG Stock Center (CGSC) database at Yale University, kindly supplied by (http://cgsc.biology.yale.edu). Annotation of the genome is an by correlated. Updated information will be available at the E coli Genetic by correlating it with other data. Comments to the authors are fenome project's World Wide Web site hose anotations are periodically updated; this is version M54. No anotation updates: updated gene identifications Riley; added promoters, protein binding sites, and repeated beginning with a lowercase 'b' assigned to each gene (protein-or names. This should allow them to be searched for in Entrez as gene
